General suggestions

- Make websites for people, not search engines.
- Make websites that convert to your end goal... not just rank for keywords.
- Build a brand around a community. One that loves you and will fight for you because they love your services. Don't shut them off.
- Make your brand so big that search engines need you.
- Don't focus on just one keyword. Do a proper keyword research to find out what people seeking your products and services are actually using.
- Read Google's SEO Starter Guide:
<http://www.google.com/webmasters/docs/search-engine-optimization-starter-guide.pdf>.

Suggestions

- Make sure that your title tag includes your keyword (a greater weighting is given to key phrases at the left of the title tag)
- A compelling call-to-action might help you get a better click-through rate in Google search engine results pages.
- Make title tag unique on each page ([Google Webmaster Tools](#) can help you detect problems with the title tags).
- Avoid keyword stuffing in your page title.
- Using the table above to compare your site to your competition.

Report: Headings (H1, H2, H3)

Headings (h1) and sub-headings (h2, h3) are texts that are written between the <h1>..</h1>, <h2>..</h2> and <h3>..</h3> tags.

Usage of H1, H2 and H3 tags. Your competition:

#	H1	H2	H3
1	2	2	2
2	7	5	N/A
3	N/A	N/A	3
4	1	2	1
5	1	3	2

Avg H2 length:	13	15	47	N/A	36	22	22	N/A	41	N/A	20	13-47	27
Avg H3 length:	N/A	23	N/A	24	9	15	15	20	20	N/A	12	9-24	17.3

Suggestions

- **Avoid keyword stuffing in any of heading tags because it will do more harm than good**
- **Using your keyword in H1 or H2 can give some minor positive effects on SEO**
- `<h1>` is the most important heading - use it only once or twice per document and include your keyword there if it fits naturally
- Use the tables above to compare your site to your competition

Body text is the text from your web page without all the HTML tags and code.

Body text

Your site:	KW Count	KW Position	KW Density	Word count	Text length
http://www.startseocompany.com	4	0	1%	404	2750

Suggestions

- Make sure that the keyword you are targeting with this page really is in your body text
- Avoid keyword stuffing in body text. Remember - each page should be targeted to different keywords.
- Put main keywords closer to the top of the document
- Don't hide text through colour by blending text color with background color
- Avoid too high keyword density (>10%) as it may lead to penalty (use synonyms, related words and [LSI](#) words - [this](#) will help you find them)
- Using the table above to compare your site to your competition (pay attention to keyword density)

URL is the address of your web page.

URL

Words in URL	KW Position	Word count	URL length
1 endlessrise	N/A	1	27
2 endlessrise white label seo html	N/A	5	47
3 zenoseo seo reseller	8	3	36

Your site:	KW Position	Word count	URL length
startseocompany	N/A	1	30

- If possible, put your main keyword in the domain name
- For SEO it seems that there is no difference between delimiting words in domain name or writing them together. From marketing standpoint it's better not to delimit words in domain name with dashes because of word of mouth marketing.

Suggestions for URL

- Make "user-friendly" urls; put your keywords there and leave out [stop words](#) like "I", "a", "an" etc. Also try to avoid special characters like "&", "?", "=", "\$", "%", "^" in the URL.
- Avoid keyword stuffing in URLs and try to keep them within a reasonable length
- [Google suggests](#) that you should use hyphens (-) instead of underscores (_) in your URLs.
- Use the table above to compare your URL to your competition

StartSEOCCompany.com

Sitemap

Sitemap is a file (or multiple files) that list URLs for a site.

- It is important to submit your sitemap to [Google Webmaster Tools](#)
- It is important to include a link to sitemap file in your [robots.txt](#) file
- If you want to [put sitemap on different domain](#) you must put a link to it in your robots.txt file
- All information about sitemaps - <http://www.sitemaps.org/>
- You can also submit your sitemap to [Bing Webmaster Tools](#)
- If you don't have a sitemap, try [sitemap generators](#)

Robots.txt

Robots.txt is a [file on your site](#) that tells web spiders (like [Googlebot](#)) how to behave on your site.

- Robots.txt should contain a link to your sitemap (for example: Sitemap:
<http://www.startseocompany.com/sitemap.xml>)
- All information about robots.txt - <http://www.robotstxt.org/>

Meta robots tag

Meta robots tag is a special HTML tag that tells robots how to behave on that page.

- Use meta robots tag if you want to prevent search engines from indexing the page.
- More information about meta robots tag - <http://www.robotstxt.org/meta.html>
- Your meta robots tag is empty - that's perfectly fine.

Suggestions

- Follow Google's suggestions on URL structure:
<http://www.google.com/support/webmasters/bin/answer.py?answer=76329&hl=en>
- For internal linking - put nofollow attribute on links to unimportant pages (from SEO standpoint - like "Privacy Policy", "Contact us" and other pages)
- Put keywords in anchor texts
- If link anchor is an image then put anchor text in image's "alt" attribute
- Avoid keyword stuffing in anchor texts
- Avoid using un-related phrases like "click here" or "more..." in anchor texts
- Linking to similar external sites will help search engines to determine your site's theme
- Use the list above to check your anchor texts and nofollow attributes

- TABLE tag - how many table tags found in the code (less is better)
- js in html - the size of code between <script> tags (less is better; js code should be moved to external file)
- IMG tag - how many image tags found in the code
- A tag - how many links found in the code
- .js - how many links to external JavaScript files found in the code
- .css - how many links to external CS files found in the code
- Validation - a link to HTML validation service (don't worry if your code has many validation errors)
- Load time - a link to free tool that analyzes page load time and shows broken images/files

- 100% [Valid code](#) is great but most of the time search engine spiders can process invalid code as well.
- Using less TABLE tag tags may result in faster page load
- Having smaller HTML will result in faster page load
- Avoid broken images on your site as it slows down page load (click on the "Load time" link to get list of broken images on site)
- Put CSS in external files. If you can combine all CSS information into one file it will make your page load faster
- Put JavaScript code in external files. If you can combine all JavaScript code information into one file it will make your page load faster
- If you are using common JS libraries (like jquery, prototype, moo tools and others) use [Google Ajax Libraries API](#) (more info [here](#))

Suggestions

- Use "alt" texts to describe the image - for [accessibility](#) and SEO reasons
- Don't overuse "alt" texts, for example, don't add them to spacer images or layout of images
- Put keywords in "alt" texts if they make sense in the context
- You can also use keywords in filenames (write keywords together or separate them with dashes)
- Avoid keyword stuffing in "alt" texts or filenames
- Use the list above to check your "alt" texts
